10. Globalization and Its Impact on Agriculture in India

Mr. Deepak Pralhad Pate

Assistant Professor, Department of Commerce, Govindlal Kanhaiyalal Joshi (Night) Commerce College, Latur.

Abstract

Globalization is the interdependence to describe the growing economy, culture and population and globalization is the process on international integration arising from the interchange of world views, product, ideas and other aspect of culture globalization is associated not only with on increasing cross border movement of goods, services, capital, technology, information and people, but also with an organization of economic activities. Globalization to build the development of money, inputs, yields, data science, graphic range. Globalization is also being portrayed as the only solution for all type of problem created to world. Thus the process of globalization is not static, it is super phenomenon which transend national frontiers. The theme of these paper is to study the growth rate of production an impact on Indian agriculture with the help of globalization before and after this concept.

Keywords:- Globalization, Agriculture, Economy.

Introduction

Globalization is the process inter national integration arising from the interchange of world views product, ideas and other aspect of culture .Agriculture is the backbone of every nation to meet its basic needs required for survival and aids in stability, sustainability and strengthen and development. It takes more than one third 1/3 of the world areas and more than two third 2/3 of the world water resources. Global environmental changes will have many effect on agricultural productivity. Globalization is being portrayed as the only solution for all type of problem rekateds to economy development of the country in general and will being of the people on particular the process of globalization is based upon the fulfillment of the dreams of the national movement.

Objectives

- To analyse the agriculture growth in globalization
- To study the problem of agriculture sectors
- To study the status of agriculture sector

- To study aimed at analysing awareness, attitude and farmers motivations as regards to globalization and its effect on agriculture sector.

Need for the Study

The present study analyse are impact of globalization on the level and agriculture growth of land yields and agriculture output. The relationship, if any between the levels and growth of agriculture output and the use of modern inputs.

Impact of Globalization on Indian Agriculture

1. Increase in national income

In international market receiving the agriculture good of India, there is an increase in farmer's agriculture product. New technology, new seeds, new agriculture machine help to grow the agriculture product. From the monetary point of view the exports of agriculture goods to other countries and receiving that countries currency it will be helpful increase in national income.

2. Use of new Technology

Increase use of various technology such as electronic machine pesticides, herbicides and fertilizer as well as new breeds of high yield crop where employed to increase food production system. These technology include modern machine implementation in irrigation product, project, pesticides, nitrogen fertiliser and improve crop varieties developed through science based method available at the time we adopt new machine new system for increasing our agriculture production.

3. Increase in Employment

If the international market enter through the globalization concept while exporting agriculture product one country to another country it is necessary to classify the products, standardization and processing, packaging etc. In the production industry totally depending on agriculture are stored and it made an increase in employment. Agriculture id the biggest sector of the Indian economy

4. Increase in Agriculture production and productivity

In the globalization green revolution had many effects on Indian economy due to the adoption of HYV (High Yielding Varieties) technology the production of food grains increase in the country. The production wheat has adopting new technology has increasing from 8.8 million tones in 1965 – 1966 to 184 million tones in 1991-1992. The productivity of agriculture food grain has large quantity increase considerably comparatively before globalization and after globalization adopting technique new machine production has increase.

5. Increasing in the Export of Agriculture of Goods

After the globalization we can easily entry in international market. The price of agriculture good are higher in international market comparison to Indian market. If the developed countries reduce grants they have increase they have price. So there will be increase in the export in Indian market and if the price grow there will be profit.

6. Reduction in Poverty

It is also rue that globalization is commonly classified as increasing the gap between rich and poor, but it is a matter of looking at poverty in relative terms. India's prior concern is of absolute poverty, which is worse than death, if India make efforts globalization can be a key to rid of it.

Conclusion

The globalization process in the economy offer an opportunity to correct the agriculture sector in Indian trade policy that have been in existence since 1950's with these the hidden 'implicit taxation' on agriculture sector would get and opportunity to response favour rate to this signal.

India has significant technical skill in the field of agriculture must develop in technology, there is no need for the country of function as the Multi-National corporation technology with there patient write. Agriculture can more on to a higher growth in production of agriculture product. Increase in production and national income and employment.
